

Remote Access Standard

Document ID	IT-STD-007
Version	3.0
Status	Approved
Effective date	2026-06-30
Owner	IT Security
Supersedes	IT-STD-007 v2.0 (GlobalConnect VPN)

Northwind Access

From **June 30, 2026** the GlobalConnect VPN client is retired. All remote access to internal systems uses **Northwind Access**, a zero-trust access client. Install it from the Self-Service app catalog and sign in with corporate SSO. There is no separate VPN connection step: Northwind Access connects automatically when an internal resource is requested.

Device requirements

Northwind Access only runs on company-managed devices with disk encryption enabled and an operating system no more than one major version behind the current release.

Personal devices

Personal devices may access email and calendar via the browser only, and cannot run Northwind Access.
